FALL 2020 - STCE-5101

SYSTEMATIC THEOLOGY AND NATURAL SCIENCE

WITH TED PETERS & ROBERT RUSSELL

This comprehensive treatment of Christian Systematic Theology expands on selected doctrinal loci (topics) with relevant findings in recent natural science. The doctrine of creation will be related to Big Bang cosmology; theological anthropology with the theory of evolution and neuroscience; Christology with deep incarnation, sin, suffering, and natural theodicy; pneumatology and sanctification with genetic engineering; eschatology with the physics of time in eternity as well as eco-ethics; and astrotheology with space exploration, extraterrestrial life, and multiple incarnations.

Prerequisites: background in Christian theology. No need for previous study in the natural sciences, even though this would be helpful. Requirements: class, participation, class leadership, scholarly term paper. [Auditors with Faculty Permission]

HEDCO, THURSDAYS 2:10-5:00
